collaboration with the European Drosophila Genome Project (EDGP) - http://www.edgp.ebi.ac.uk - This Drosophila melanogaster BAC library (Dros BAC) was made by Alain Billaud at CEPH (Centre d'Etude du Polymorphisme Humain) with funding provided by a MRC project grant. The DNA was prepared from embryos by Alain Bucheton and Genevieve Payan. It has been constructed in the vector
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Drosophila melanogaster genome survey sequence SP6 end of BAC BACN37A07 of DrosBAC library from Drosophila melanogaster (fruit fly), genomic survey sequence.

Submitted (23-JUL-1999) Genoscope - Centre National de Sequencage : BP 191 91006 EWR cedex - FRANCE (E-mail : seqref@genoscope.cns.fr - Web : www.genoscope.cns.fr)
Determination of this BAC-end sequence was carried out as part of a collaboration with the Buropean Drosophila Genome Project (EDGP) - http://www.edgp.ebi.ac.uk - This Drosophila melanogaster BAC library (Dros BAC) was made by Alain Billaud at CEPH (Centre Project Gentre Project Gentre Project Prant. The DNA was prepared from embryos by Alain Bucheton and Genevieve Payan. It has been constructed in the vector

By 19 91000 EARL CHECKA LARGE CONTROLL OF MANY GENOROPE CARE AND A SECTION OF THIS BACTON Sequence was carried out as part of a Determination of this BACTON Sequence was carried out as part of a Determination of this BACTON Sequence of the Drosophila The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACS. For further information melanogaster genome using these BACS. For further information please see http://www.fruitfly.org the BDGP Drosophila please see http://www.fruitfly.org the BDGP Drosophila melanogaster BAC library was prepared by Kazucyo Googeawa and Azono Manmoser in Picter Ge Jong's laboratory in the Department Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, Escapic Strain v2: on bw sp., the same strain used for the BDGP's I and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://Dacpac.med.buffalo.edu/drosophila_bac.htm.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            0;

Drosophila melanogaster genome survey sequence SP6 end of BAC BAC BACN03604 of DrosBAC library from Drosophila melanogaster (fruit 11y), genomic survey sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Web: www.genoscope.cns.fr)
Determination of this BAC-end sequence was carried out as part of a collaboration with the European Drosophila Genome Project (EDGP) - http://www.edgp.ebi.ac.uk · This Drosophila melanogaster BAC library (Dros BAC) was made by Alain Billaud at CEPH (Centre d'Etude du Polymorphisme Humain) with funding provided by a MRC project grant. The DRA was prepared from embryos by Alain Bucheton and Genevieve Payan. It has been constructed in the vector
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Direct Submission

- Web : www.genoscope.cos.france (E.Malli : Sequence was carried out as part of a collaboration of this BAC-end sequence was carried out as part of a collaboration with the Barkeley Drosophila Genome Project (BDCP). The BDGP is constructing a physical map of the Drosophila melanogaster agenome using these BACs. For further information please see http://www.fruitily.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Oscogawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is amed RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; or bw sp. the same strain used for the BDGP's and how to order individual BAC clones, the entire library and how to order individual BAC clones, the entire library or filters for hybridization from the BACPAC Resource Center can be location/Qualifiers

Determination of this Bac-end sequence was carried out as part of a collaboration with the Buropean Drosophila Genome Forject (EDEP) - http://www.edgp.ebi.ac.uk - This Drosophila melanogaster BAC library (Dros BAC) was made by Alain Biland at CEPH (Centre drough the Option of the Centre droporthisme Humain) with funding provided by a MRC project grant. The DNA was prepared from embryos by Alain Bucheton and Genevieve Payan. It has been constructed in the vector
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö

- Determination of this BAC-end sequence was carried out as part of a Determination of this BAC-end sequence was carried out as part of a Determination of this BAC-end sequence was carried out as part of a Determination of this BAC-end sequence was carried out as part of an angagater genome using these BACs. For further information please see http://www.fruitfly.org the BDGP brosophila melanogaster BAC library was prepared by Kazutcyo Coscogawa and Aaron Mammoser in Pieter Ge Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcokI digestion of Drosophila DNA provided by the BDGP from the EcokI digestion of Drosophila DNA provided by the BDGP from the Stand EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library or filters for hybridization from the BACPAC Resource Center can be found the hyp://bacpac.med.buffalo.edu/drosophila_bac.htm.

Genomic DNA isolated from broth cultures of E. histolytica
using a method described by Clark and Diamond, Clark,
C.G., and Diamond, L.S. (1993) Entamoeba histolytica: a
method for isolate identification. Exp. Parasitol.
77:450.). The DNA was mechanically sheared to give a
fight size distribution (-2 kb). The v + i method used for
the library construction is described in detail in Smith,
H.O. and Venter, J.C. (Making small insert libraries for
whole genome shotgun sequencing projects. In Genome
Sequencing: A Practical Approach, eds. M. Vaudin and B.
Barell, Oxford University Press, 1999)."

Institute for Genomic Research (TIGR), Rockville, MD.
Genomic DNA isolated from broth cultures of B. histolytica
using a method described by Clark and Diamond (Clark,
C.G., and Diamond, L.S. (1993) Entamocba histolytica: a
method for isolate identification. Exp. Parasitol.
// 7.450.) The DNA was mechanically sheared to give a
tight size distribution (-2 kb). The v + i method used for
tight size distribution (-2 kb). The v + i method used
for the library construction is described in detal in Smith,
H.O. and Venter, J.C. (Making small insert libraries for
whole genome shotgun sequencing projects. In Genome
Sequencing: A Practical Approach, eds. M. Vaudin and B.
Barell, coxford University Press, 1999)."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Department of Englands Canomics

continuous ABB90526-ABB90715 represent novel proteins from Chlamydia predences ABB90526-ABB90715 represent novel proteins from Chlamydia continuous fatrain CWL029), and ABL91184-ABL91373 represent DNA encoding them. The proteins are predicted to be immunogenic and may therefore be useful in vaccine production and for diagnostic purposes. Chlamydia cuseful in vaccine production and for diagnostic purposes. Chlamydia commoniae is a common cause of respiratory disease in humans, and is a state into involved in the development of cardiovascular diseases such as the development of cardiovascular diseases such as the process of the invention continuous stroke. The proteins and nucleic acids of the invention or treatment of chlamydial infections, particularly chlamydia preumoniae infections. The proteins may also be used in PCR, branched CC Chlamydia pneumoniae, and the nucleic acids may be used in PCR, branched commoniae, and the nucleic acids may be used in PCR, branched preumoniae gene expression. The present sequence represents a specifically claimed DNA which encodes a Chlamydia pneumoniae protein of the invention.
                                                                                                                                                                                                                                                                                                                                                          Chlamydial infection, antigen; immunogen; vaccine; diagnosis; human respiratory disease; cardiovascular disease; atherosclerosis; coronary artery disease; carotid artery stenosis; myocardial infarction; cerebrovascular disease; aortic aneurysm; claudication; stroke; strain CWL029; open reading frame; ORF; gene; ds.

The present sequence is the cod-5 gene from Caenorhabditis elegans. Cod-5 is the aromatic amino acid hydroxylase that synthesises serrotonin froom precursor Ltryptophan. The cod-5 gene was knocked out to produce mutants precursor Ltryptophan. The cod-5 gene was knocked out to produce mutants completely lacking in serotonin. These mutants were found to have defects in metabolic control. A number of c. elegans proteins that have defects can mamalian homologues acting in the insulin signalling pathway were also remained in PI 3-kinase whilst daf-2 encodes a homologue of the mammalian proceptor. The C. elegans ART kinase and PKB kinase act downstream of insulin signalling. The C. elegans PFEN lipid phosphatase homologue.

Co fad-2 and age-1, just as their mammalian homologues act downstream of consulin synalling pathway. This discovery has enabled mammalian PFEN action to be mapped to the insulin signalling pathway. Conserved DAF motifs can be used to design probes to redisposition towards the development of glucose intolerance conditions,
                                                                                                                                                                                                                                                                                                                                           ds.

The invention relates to a nucleic acid (I) comprising a sequence at least 18 bases in length of a segment of chemically pretreated DNA (II) of genes associated with development selected from 87 genes listed in the specification such as ACCPN, ADFN, or AFDI and comprising one of 35 cequences (ABNT9984-ABN80333) or their complements. The invention is sequences (ABNT9984-ABN80333) or their complements. The invention is useful for the diagnosis or therapy of diseases associated with compension or therapy of diseases sasociated with congenital heart disease, epilepsy, diseases, syndromes associated with congenital heart disease, epilepsy, diseases related to historie deacetylation; Currarino syndrome, diseases related with the development of the brain and limb girdle muscular dystrophy and dwarfism. Oligomers specific to each of the genes are useful for detecting the complements requences, as primer oligonuclectides for (II) and their complementsy sequences, as primer oligonuclectides for the amplification of the 350 sequences, (II) and/or their complements and as oligomer probes for detecting the cytosine methylation state and/or single nucleotide polymorphisms (SNPs).

C Note: The sequence data for this patent did not form part of the printed specification but is based on sequence information supplied to berwent by the complements of the model.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Caenorhabditis elegans; cod-5; daf-18; insulin signalling pathway; daf-2; age-1; insulin receptor; PI 3*kinase; PRB kinase; PRB kinase; PTRN lipid phosphatase; antidiabetic; anorectic; obesity, diabetes; ss.
associated with development genes such as diabetes, comprises a sequence of a segment of chemically pretreated DNA of genes associated with development -

The present sequence is a Caenorhabditis elegans cod-5 knockout cDNA.

Most of the cod-5 gene has been deleted and this has caused a frameshift
in the remaining coding region. Cod-5 is the aromatic amino acid
the cod-5 gene was knocked out to produce mutants completely lackfing in
cod-5 gene was knocked out to produce mutants completely lackfing in
cod-5 gene was knocked out to produce mutants completely lackfing in
cod-5 gene was knocked out to produce mutants completely lackfing in
cod-5 gene was knocked out to produce mammalian homologues acting in
the insulin signalling pathway were also identified. The C. elegans age-1
cancedes a homologue of the mammalian PI 3-kinase whilst daf-2
encodes a homologue of the mammalian pisulin signalling. The C. elegans
codes a homologue of the mammalian issulin signalling. The C. elegans
codes a homologue act downstream of insulin signalling. The C. elegans
code mammalian homologues act downstream of insulin signalling pathway. Conserved DAF mottls can
code mapped to the insulin signalling pathway. Conserved DAF mottls can
code be mapped to the insulin signalling pathway. Conserved DAF mottls can
code used to design probes to identify mammalian DAF homologues and thus to
definity individuals with a predisjoosition towards the development of
glucose intolerance conditions, such as obesity and diabetes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   5,

The present invention describes a library of human polynucleotides comprising the sequences given in AAZ1253 to AAA17779. Also described is a method of detecting differentially expressed genes correlated with the cancerous state of a mammalian cell, comprising detecting at least one differentially expressed gene product in a test sample from a cell suspected of being cancerous, where the gene product is encoded by one of the 5248 polynucleotide sequences given in AAZ12532 to AAZ1779. The polynucleotides can be used as a source of primers and probes, which can be used for a variety of purpose, e.g. detection of expression levels, mapping, tissue typing or profiling, forensics, genetic analysis and detection of polymorphisms. Polypeptides encoded by the polynucleotides can be used for raising antibodies for experimental, diagnostic and therapeutic purposes. The polynucleotides may also be used to construct arrays for diagnostics (which may be used to determine function of an

The invention relates to a nucleic acid, which comprises a segment of the chemically pretreated DNA of genes associated with DNA transcription from one of 346 sequences, and an oligomer in particular an oligonucleotide or peptide nucleic acid (PNA)-oligomer that hybridises to or is identical to the chemically pretreated DNA of genes associated with DNA transcription. The set of oligomer probes are useful for detecting the cytosine methylation state and/or single nucleotide polymorphisms (SNPs) in a chemically pretreated genomic DNA. The nucleic acids are useful for diagnosing or treating diseases associated with DNA transcription in a chemically pretreated genomic DNA. The nucleic acids are useful for diagnosing or treating diseases associated with DNA transcription (particularly with the methylation status), e.g. adenosine deaminase deficiency, viral infection, retroviral infection, Sazary syndrome, memaclogical disorders, immunological disorders, where syndrome, chemically acids and developmental disorders, psoriasis, sporiasis, developmental disorders, psoriasis, syndrome, numeran-tick disease, mylologyplutamine disorders, solid tumours of infarction, hypertension, anglogenesis, erythropolesis, congenital heart disease, HDNR syndrome, arthritis, polyglutamine disorders, solid tumours associated genomic DNA molecules of the invention.

Note: The sequence data for this patent did not form part of the printed syndrome patent Office.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö

The invention relates to nucleic acids containing a sequence of at least

18 nuclectides of chemically treated DNA of genes associated with DNA

18 nuclectides of chemically treated DNA of genes associated with DNA

19 cepair, and their complements. The invention also relates to nucleic

20 cepair, sasociated with DNA repair selected from PNSZLL,

21 PMSZL2, PMSZL3, PMSZL3, PMSZL5, PMSZL6, MGMT, MSRZL, NUCPT1, TDG, INPPL1,

22 PMSZL2, PMSZL3, PMSZL6, PMSZL6, MGMT, MSRZL, NUCPT1, TDG, INPPL1,

23 RFC4, DDITIL, FANUB, Or XRC68. Nucleic acids of the invention and related

24 cliquency, are useful for diagnosis of diseases associated with gene

25 cliquency, specifically attain the angle-taskin, aging, Bloom's syndrome,

26 clockayne syndrome, Nijmegen breakage syndrome or Wentner syndrome,

27 clockayne syndrome, Nijmegen breakage syndrome or Wentner syndrome,

28 clockayne syndrome, Nijmegen breakage syndrome or Wentner syndrome,

29 clockayne syndrome, Nijmegen breakage syndrome or Wentner syndrome,

20 clockayne syndrome, Nijmegen breakage syndrome or Wentner syndrome,

20 clockayne syndrome, Nijmegen breakage syndrome or Wentner syndrome,

20 clockayne syndrome, Nijmegen breakage syndrome or Wentner syndrome,

20 clockayne syndrome, Nijmegen paterns may allow development of individualised

21 chemically pre-treated DNA fragments from genes associated with DNA

22 chemically pre-treated DNA fragments from genes associated with DNA

23 content of the sequence data for this patent is not represented in the

24 content of the syndrome, SNA fragment is not represented in the

25 content of the syndrome or SNA fragment is not represented in the

26 content of the syndrome or SNA fragment is not represented in the

27 content of the syndrome syndrome.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 1;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          944 ATGATICGGIAGIAGGAATAIGGGGICGAGIAIGCACGIIGGAGIGAIIGGCIGTICIGG 1003

The invention relates to nucleic acid sequences comprising at least 18 bases of a chemically pretreated gene associated with gene regulation, selected from 94 genes (ABL49301-ABL49394) and/or complementary sequences associated with DNA replication, CENPB, DNA2L, ATR, CHDIL, ERCC3, SNRPAL, RAD50 and Ling2. The chemical pretreatment converts cytosine bases unmethylated at the 5-position to uracil or another base with hypridisation behaviour dissimilar to cytosine, to enable analysis of cytosine methylations. The DNA sequences and method are useful in the cytosine methylations. The DNA sequences and method are useful in the cytosine methylations. The passociated with DNA replication and in therapy of such diseases, by enabling analysis of the cytosine methylation patterns of such genes. They are especially useful in diagnosis and therapy of eigh Ataxia telanniectusia, ATR-X, Bloom's syndrome, solid tumours and cancer.

Complementation and was supposed to be available directly from WIPO at the wipo. Intypub/published_pct_sequences. However, the sequence data did contour correspond to that referred to in the specification. The present data is taken from EPO data for the patent.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ä

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention describes a gene (I) derived from Buchnera sp. containing the DNA (a) or (b), (a) has a filly defined base pair sequence selected from a table of sequences found in the Buchnera sp. genomic DNA of ABA92787 given in the specification or is a DNA selected from complementary DNA sequences, and (b) is a DNA whitch hybridises with the DNA (a) and encodes a protein. Also described are: (1) a recombinent vector (II) containing (I); (2) a transformant (III) containing (II); (3) a genomic DNA of Buchnera sp. containing the sequence given in ABA92787; (4) a plasmid derived from Buchnera sp. containing DNA (c) or (d), (c) is a DNA containing a fully defined sequence given in ABA92789 and (d) is a plasmid which hybridises with a DNA; and (5) a method for the preparation of a protein in which (III) is cultured and
                                                                                                                                                                                                                                                            printed
